PROFESSIONAL SUMMARY

Data-driven Cybersecurity Professional and Computer Science undergraduate specializing in Risk Advisory and Consulting. Experienced in vulnerability assessment, IT Audit (ITGC), and data analytics with a proven track record of identifying anomalies in complex audit datasets. Expert in leveraging Python and AI to automate security reporting and derive actionable business insights for enterprise stakeholders.

SKILLS

Security & Risk: Vulnerability & Risk Assessment (VAPT), IT Audit, NIST & ISO 27001 Frameworks, Network Security

Data & AI: Python (Pandas, NumPy, Scikit-learn), SQL, Machine Learning, Generative AI, Statistics, Risk Analytics

Tools & Forensics: AES-256 Encryption, OSINT Techniques, Digital Forensics, Wireshark, Nmap, Metasploit

Soft Skills: Client Handling, Leadership, Analytical Thinking, Business Communication, Stakeholder Management

PROFESSIONAL EXPERIENCE

Cyber Security Consultant Intern (*BDO India*)

- Enhanced risk visibility by analysing large-scale audit datasets to identify security anomalies and emerging threat trends.
- Executed data-driven risk assessments aligned with global standards (NIST & ISO 27001), ensuring compliance for enterprise clients.
- Architected automated reporting workflows using Python, reducing manual effort in vulnerability documentation by 40%.
- Synthesized complex technical data insights into actionable business recommendations for executive-level stakeholders.
- Assessed IT General Controls (ITGC) to validate the integrity and security of financial and operational systems.

KEY PROJECTS

Web Sentinel: AI-Based Vulnerability Analysis Tool

- Developed a Python-based pipeline for automated data collection and cleaning to identify critical web vulnerabilities.
- Integrated Machine Learning models to generate automated insights and predictive patterns in security threats.

AMOT: Forensics & Ransomware Analyser

- Built a forensic engine leveraging AI and OSINT techniques to detect and mitigate ransomware threats in Realtime.
- Utilized advanced data management techniques to ensure secure handling of sensitive forensic evidence.

Secure Password Vault

- Designed and implemented a high-security storage system utilizing AES-256 encryption for structured data protection.

EDUCATION

B.E. Computer Science Engineering (Cyber Security)

2022 – 2026

Percentage: 83% (Class 12) | 91% (Class 10)

CERTIFICATIONS

- CCNA (Networking, Security & Automation) – Cisco
- Python Essentials – Cisco Networking Academy
- Vulnerability Assessment & Penetration Testing (VAPT)
- Google Generative AI Professional Certification
- Network Security & Digital Forensics
